

Hidden Harms: Human (In)security in Outer Space

Visualization

By Jessica West

SEPTEMBER 2024

1.

Outer space is a human environment. Although relatively few humans are located in outer space, it is deeply connected to human well-being through capabilities linked to essential services and infrastructure, science, spirituality, and culture. But space also causes human harm.

2.

Intersectionality recognizes that human experiences related to outer space are not uniform. Sources of power and inequality that shape these experiences are layered, unequal, and intersect with one another.

3.

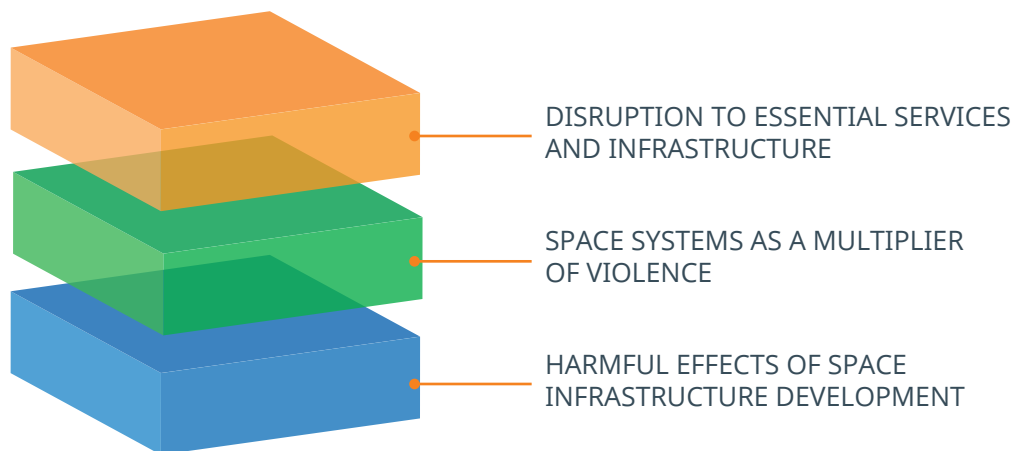

For **space security**, this means that the benefits and harms associated with outer space exist along a continuum and are not experienced the same way by everyone. Sometimes benefits for some can be experienced as harms by others.

4.

When thinking about the human implications of insecurity related to outer space, we must recognize that there are multiple layers of vulnerability.

Triple vulnerability:

Harms can stem from actions taken against space systems, environmental effects, interactions with other technologies, or space systems themselves.

Vulnerability paradox: Those with less access to space may be more vulnerable to disruptions of those services and may have less protection from harmful uses of space systems.

5.

Harms associated with outer space are often shrouded and amplified by layers of invisibility.

6.

Language and concepts matter: Many concepts associated with space activities and approaches to security in outer space perpetuate sources of harm because they are:

7.

But we can shift our thinking about space security. Approaches and concepts from other fields can help to correct limitations and reduce harms that stem from dominant discourses, while providing alternative modes of peace, security, and governance.

Underpinning all of these concepts is an understanding of the connectedness of different groups of people across geographic, developmental, and other social identities, with each other and with the space environment.

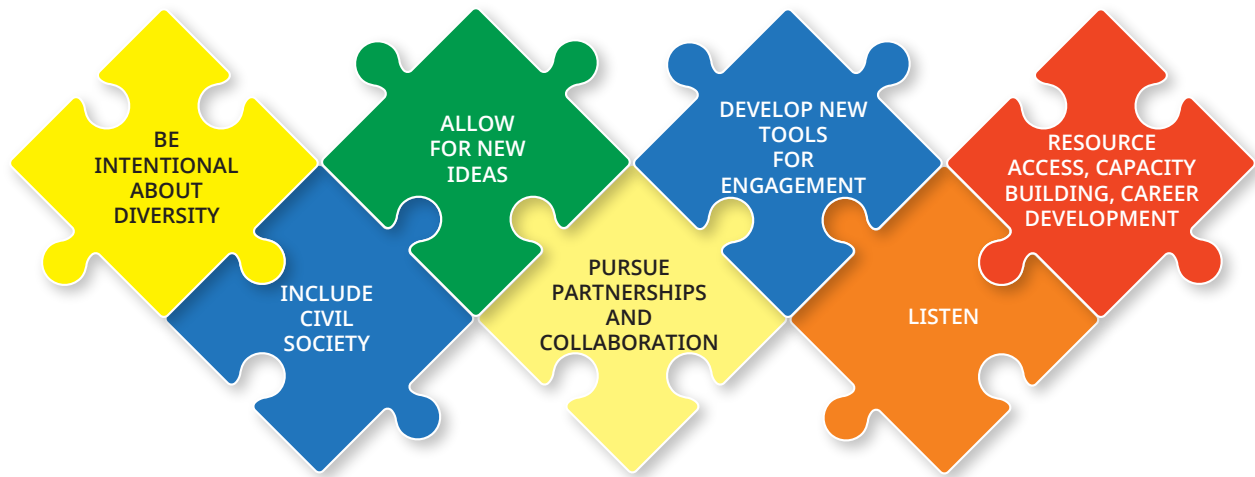

8.

We can also change how we approach space security, by valuing connectedness and mutual care.

9.

And we can change how we practise space security by emphasizing meaningful engagement. Beyond opening the door to participation, this requires a global commitment to:

10.

Finally, a commitment to more inclusive approaches to space security requires resources to support and sustain the engines of change.

ACKNOWLEDGEMENTS

This report is possible because of the following:

Funding support from the Mobilizing Insights in Defence and Security (MINDS) program of the Canadian Department of National Defence

Research leadership and management by Dr. Jessica West of Project Ploughshares

Workshop facilitation and research contributions by Guiliana Rotola (Space Policy Institute), Vaishnavi Panchanadam (University of British Columbia), Taylor Douglas (London School of Economics), and Allyssa Walsh (Dalhousie University)

Participants at the global series of virtual workshops held on July 13-14, 2023

Workshop rapporteurs Charlotte Hook (Space Policy Institute), Asha Harris (Wilfrid Laurier University), Abishane Suthakaran (Wilfrid Laurier University), and Project Ploughshares summer interns Morgan Fox (Queen's University) and Laine McCrory (McGill University)

Editing by Ploughshares Editor Wendy Stocker

Design and layout by Ploughshares Senior Communications Officer Tasneem Jamal.

Project Ploughshares is a Canadian peace research institute with a focus on disarmament efforts and international security specifically related to the arms trade; emerging military and security technologies; nuclear weapons; the protection of civilians; outer space; and the intersection of climate, peace, and security.
